

Chapter 11

Code Samples

CS3283 - Hugh Anderson's notes.

Page number: 362

Assignment 2 - Code quality?

```
CODE LISTING          lect9.1.tcl          Page 1/1
#!/usr/local/bin/wish
# This demonstration script creates a canvas widget showing a 2-D
# plane. It can be dragged with the mouse.
# RCS: w(8) 2xd: plot.tcl,v 1.2 1998/09/14 16:23:29 stanton Exp 2
if {[info exists widgetDemo]} {
    set w [plot
        -title "A Demonstration"
        -width 450 -height 300
        -xscrollbar 0 -yscrollbar 1
        -xrelief raised -yrelief raised
        -width 450 -height 300
        -font splotFont -wraplength 41 -justify left -text "This window ..."
    ]
    pack $w
    bind $w <Any-Enter> "bind $w <Motion> {bind $w <Leave>}"
    bind $w <Motion> "bind $w <Leave>"
    bind $w <Destroy> "destroy $w"
}
catch {destroy $w}
```

CS3283 - Hugh Anderson's notes.

Assignment 2 - debugging?

Write code clearly: Edit, document, comment...

```
#####
# GetCommandString( x,y,itemId ):string
#   Returns a string that is later executed as a
#   command
#   The parameters x and y are the current cursor
#   position, and itemId is the closest visible
#   item on the canvas .canv
# Requires: Uses global variable canvas .canv
# Ensures: Always returns a command of some sort
#           Sets global variable ErrorID if there is
#           any error..
# Last modified: 12/2/2004 - by Hugh
#####
```

Assignment 2 - debugging?

- ✓ Run wish, and then use `source x.tcl`
- ✓ ... then interact with running program...

Assignment 3

3 options:

1. Re-implement YOUR assignment 2
2. A simple (but actually useful) visualization
3. Image library assistant...

Assignment 3 (option a)

- ✓ The tricky thing is the graphics component
- ✓ Some help with it...

Java Graphics API

```
public void paintComponent(Graphics g) {  
    super.paintComponent(g); //paint background  
    //Paint a filled rectangle at user's chosen point.  
    if (point != null) {  
        g.drawRect(point.x, point.y, rectWidth-1, rectHeight-1);  
        g.setColor(Color.yellow);  
        g.fillRect(point.x+1, point.y+1, rectWidth-2, rectHeight-2);  
    }  
}
```

Graphics API

1. Basic/AWT - Abstract Graphics class
2. Java2D

Coordinate system

- ✓ Upper left of each component is (0,0)
- ✓ Behind the title bar of a window
- ✓ Container class has `getInsets` method
- ✓ Graphics objects contain methods for drawing

Graphics API

- ✓ Swing components have a method `paintComponent` which takes a graphics object as an argument
- ```
public void paintComponent(Graphics g)
```
- ✓ Overide this to draw your objects.
  - ✓ Also may call the `repaint()` method

## Graphics class methods

```
clearRect(int x, int y, int width, int height);
draw3DRect(int x, int y, int width, int height, boolean raised);
drawImage(Image img, int x, int y, Color bgcolor, ImageObserver observer);
drawLine(int x1, int y1, int x2, int y2);
drawOval(int x, int y, int width, int height);
drawPolygon(int xPoints[], int yPoints[], int nPoints);
drawRect(int x, int y, int width, int height);
drawRoundRect(int x, int y, int width, int height, int arcWidth, int arcHeight);
drawString(String str, int x, int y);
```

CS3283 - Hugh Anderson's notes.

Page number: 374

## Graphics class methods

```
fill3DRect(int x, int y, int width, int height, boolean raised);
fillArc(int x, int y, int width, int height, int startAngle, int arcAngle);
fillOval(int x, int y, int width, int height);
fillPolygon(int xPoints[], int yPoints[], int nPoints);
fillRect(int x, int y, int width, int height);
fillRoundRect(int x, int y, int width, int height, int arcWidth, int arcHeight);
```

CS3283 - Hugh Anderson's notes.

Page number: 375

## Graphics class methods

```
Color getColor();
Font getFont();
FontMetrics getFontMetrics();
setColor(Color c);
setFont(Font font);
```

CS3283 - Hugh Anderson's notes.

Page number: 376

## Graphics API

- ✓ Use JPanel instead of JComponent
- ✓ UI delegate (for look-and-feel painting) is called in JPanel
- ✓ UI delegate not called in JComponent

CS3283 - Hugh Anderson's notes.

Page number: 377

## Text in Graphics API

- ✓ Note - you paint text using `drawString()`
- ✓ `getFontMetrics()` to get a `FontMetrics` object

```
getHeight()
getAscent()
getDescent()
charWidth()
```

- ✓ and so on...

## Assignment 3 (option b)

- ✓ Start with a large number (>1000000) points to be plotted, explored, displayed.
- ✓ If only a 1024\*768 screen there are <1000000 points on screen.
- ✓ In some small region with (say) 10\*10 points, there might be no difference between a display with 100 dots and one with 100000 dots.

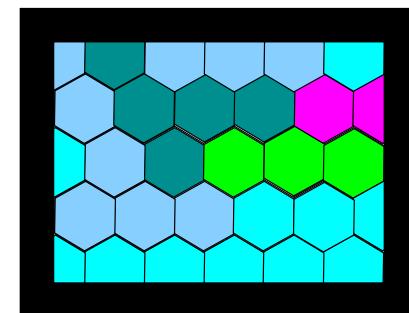

## Assignment 3 (option b)

- ✓ So...
- ✓ Tile the display
- ✓ Black and white? Colour?

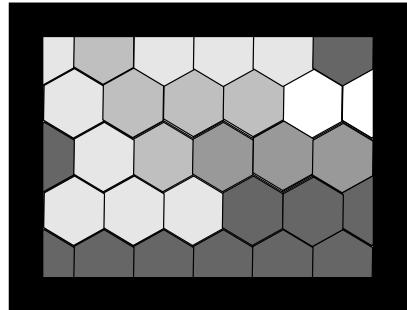

## Assignment 3 (option b)

### Assignment 3 (option b)

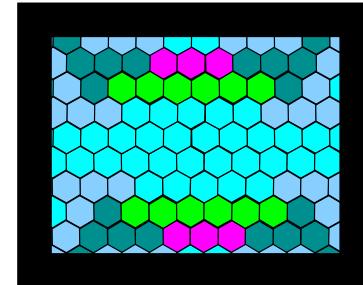

CS3283 - Hugh Anderson's notes.

Page number: 382

### Assignment 3 (option b)

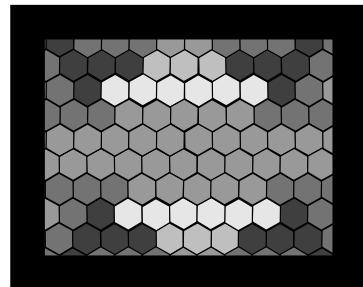

CS3283 - Hugh Anderson's notes.

Page number: 383

### Assignment 3 (option b)

CS3283 - Hugh Anderson's notes.

Page number: 384

### Assignment 3 (option b)

- ✓ Must use a slider to change the tiling.
- ✓ May show different zoom levels, and locations of data
- ✓ Processing of other tilings in background using threads...  
(i.e. no pauses)

CS3283 - Hugh Anderson's notes.

Page number: 385

## Assignment 3 (option c)

- ✓ Java application or a Java applet
- ✓ User interface to assist in the management of *large* numbers of images.
- ✓ Principally display TEXT information (spreadsheet),
- ✓ May also display small (thumbnail) versions of the images

CS3283 - Hugh Anderson's notes.

Page number: 386

## Assignment 3 (option c)

- ✓ Database
- ✓ Special purpose editor for ...
  - ✓ classifying,
  - ✓ annotating and
  - ✓ querying a large number of images.

CS3283 - Hugh Anderson's notes.

Page number: 387

## Assignment 3 (option c)

- ✓ Image DSCN0100.JPG (Tim at a party): It is in
  - "Friends"
  - "Trip to NZ in Dec 2003", which is itself in the section "Trips"
  - "Hooligans"
- ✓ Main screen shows a list of images.

CS3283 - Hugh Anderson's notes.

Page number: 388

## Assignment 3 (option c)

Editable and fixed annotation fields:

- The date and time the image was entered into the section (not editable).
- A unique identifier for the image
- A scrollable text box with (say) 5 visible lines of text description.

CS3283 - Hugh Anderson's notes.

Page number: 389

## Assignment 3 (option c)

Minimum flow of operation:

1. create, locate and delete new sections,
2. import image(s), using selection or cut and paste.
3. edit image/section information annotations,
4. save and load new databases,
5. query the system with a text search.

## Deliverables:

- ✓ Single (zipped) file with sourcecode, README, docs in PDF
- ✓ Documentation:
  - ✓ A title page, Table of contents...
  - ✓ A one page introduction to the application
  - ✓ A one page technical section
  - ✓ A one to three page section describing the interface

## Assessment:

The assessment is as follows:

|                            |     |
|----------------------------|-----|
| Documentation              | 15% |
| Code style/quality         | 35% |
| Operation of the interface | 50% |

## Assignment 3 - code quality?

## Debugging Java

- ✓ Netbeans debugger
- ✓ The java debugger `jdb`

CS3283 - Hugh Anderson's notes.

Page number: 394

## Debugging Java

On suns...diffi culty with versions of java and jdb and ddd

```
PATH=/usr/local/java/j2sdk1.3_1_02/bin:$PATH;export PATH
```

CS3283 - Hugh Anderson's notes.

Page number: 395

## MFC

- ✓ Microsoft Foundation Classes - classes needed to produce GUI Windows programs.
- ✓ Development cycle - RAD, then editing.

CS3283 - Hugh Anderson's notes.

Page number: 396

## MFC menus

A resource fi le for a simple File/Quit menu:

```
#define MYAPP_EXIT 3210
MyApp MENU
 POPUP "File"
 {
 MENUITEM "Exit",MYAPP_EXIT
 }
```

CS3283 - Hugh Anderson's notes.

Page number: 397

## Menus

In the `Create` call, you can do something like this:

```
Create(NULL, "Example", ..., CRect(...), NULL, "MyApp");
```

The `MYAPP_EXIT` message may be bound using the `DECLARE_MESSAGE_MAP()` macro, and with the following declaration:

```
ON_COMMAND(MYAPP_EXIT, OnExit)
```

## Message handler

```
afx_msg void CMenusWin::OnExit()
{
 SendMessage(WM_CLOSE);
}
```

## MFC Program

## MFC program

| CODE LISTING                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | FirstApp.cpp |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <pre>#include &lt;afxwin.h&gt; class CFirstWindow : public CFrameWnd { public:     ~CFirstWindow(); protected:     CStatic *m_pGreeting; }; CFirstWindow::CFirstWindow() {     Create( NULL,             "First Application",             WS_OVERLAPPEDWINDOW,             CRect( 100, 100, 400, 220 ) );     m_pGreeting = new CStatic();     m_pGreeting-&gt;Create(         "Hello World",         WS_VISIBLE   SS_CENTER,         CRect( 50, 30, 200, 50 ),         this ); } CFirstWindow::~CFirstWindow() {     delete m_pGreeting; } class CFirstApp : public CWinApp { public:     BOOL InitInstance()     {         m_pMainWnd = new CFIRSTWindow();         m_pMainWnd-&gt;ShowWindow( m_nCmdShow );         m_pMainWnd-&gt;UpdateWindow();         return TRUE;     } } FirstApp;</pre> |              |

## Hungarian notation

| Prefix | Meaning                  |
|--------|--------------------------|
| c      | Class declaration        |
| m_     | Class member variable    |
| p      | Pointer                  |
| n or i | Integer                  |
| on     | Event or message handler |

## MFC class hierarchy
