VISION & GRAPHICS FOR SPECIAL
EFFECTS

Project Update

Course Instructor
Assoc Prof Leow Wee Kheng

Project Team Members
Kim Hai Quang
Le Nguyen Quang Khang

1. Changes

The story was modified a little. Below is the new story line:

After class, two students were talking to one another when they noticed a strange guy passing by. The guy was wearing sunglasses and looked weird. Being curious, the two approached the strange guy, and tried to catch his attention. The guy turned back and removed his sunglasses. In their greatest terror, the two students realized that the strange guy had one big red eye. They turned around and tried to run away. The guy shot one laser beam from his eye and hit the pole. The pole exploded. The guy then aimed the shot at the other student. It hit the floor and caused a big explosion.

2. Progress

The video footages have been captured. Below are some screen shots of the video footages that we have captured

We are in the process of learning the techniques required to do the special effects.

The main difficulties are to make the effect look realistic. The learning curve is quite big and we do not have much time to learn so far because of the busy office work schedule.

We will try to achieve all the effects as planned. However, if time does not permit, we will remove one or two and focus on the rest.

Distribution of work
