

CS5245 Vision and Graphics for Special Effect

Proposal

1. Title of effect video

“GOOD NIGHT”

2. Project team members

Wang Ziyuan	U065164E
Liu Ling	U077307W
Huang Zhongming	U065087J

3. The Effect

- > The main effect will be “transformation”.
- > The novelty of this effect is to transform liquid to a jelly-like monster.

4. The Story

A girl suffered from insomnia and could not sleep at night. She got up from her bed and walked around the room anxiously, without being aware of some liquid oozing from under the door. She sat down in a chair and picked up a book to read, while the liquid was growing and forming a monster behind her. She felt something wrong and turned back with a look of fright. A roaring monster was pressing its terrifying face close to her! The girl fainted from fear. Seeing her "fell asleep", the monster made a funny face and smiled. It tucked her in and turned off the light before leaving the room.

5. Production ideas

- >The model of the monster and the transformation from liquid to monster will be implemented in Maya.

>The model and shadow will be integrated into the video.

>The interaction between the monster and real stuff will be done by multiple layers.
